

Initial Project Proposal

Name: Y. Ugatharsini(JF/ICT/24/33)

1. Project Title

Ice Cream Shop E-Commerce Management System

2. Project Description

The proposed Ice Cream Shop E-Commerce Management System is a web-based system developed to provide an online platform for an ice cream shop.

The system will allow customers to browse available ice cream products, search for products, view product information, place orders, and view their order details. The system will also provide a contact page through which customers can communicate with the ice cream shop.

The purpose of this system is to provide customers with a convenient way to explore and order ice cream products online while allowing the shop to manage its products and customer orders efficiently.

3. Problem Statement

In a traditional ice cream shop, customers may need to visit the shop or contact the shop directly to find information about available products and place orders. Managing customer orders and product information manually can also be time-consuming and difficult to organize.

Customers may also have difficulty finding a specific product when there are many ice cream products available.

Therefore, an online Ice Cream Shop E-Commerce Management System is proposed to provide a more convenient method for customers to browse, search, and order products while improving the management of customer orders and product information.

4. Project Objectives

The main objectives of the proposed system are:

- To develop a complete web-based ice cream shop system.
- To provide customers with an online platform to browse ice cream products.
- To provide a product search facility.
- To allow customers to place orders online.
- To allow customers to view their orders and order details.
- To provide an organized method for managing customer orders.
- To provide a contact facility for customer inquiries.
- To improve the efficiency of product and order management.
- To provide customers with a simple and user-friendly shopping experience.

5. Target Users

The proposed system will have two main types of users.

Customers

Administrator

6. Main System Features

The system will include the following main features/modules:

- Home Page
- Product Display
- Product Search
- Product Details
- Ordering System
- Orders Page
- Order Details
- Contact Page
- Product Management
- Order Management

7. Proposed Technology Stack

Frontend: HTML, CSS, JavaScript

Backend: PHP

Database: MySQL

Development Environment: XAMPP

8. Expected Outcome

At the end of the project, a fully functional Ice Cream Shop E-Commerce Management System is expected to be developed.

The completed system will allow customers to browse ice cream products, search for products, view product details, place orders, view their orders, view order details, and contact the shop.

The administrator will be able to manage product information and customer orders through the system.

Overall, the project is expected to provide a convenient online shopping experience for customers and a more organized method of managing products and orders for the ice cream shop.
